This clone was sequenced as part of a high-throughput process to sequence clones from Drosophila Gene Collection 1 (Rubin et al., Science 2000). The sequence has been subjected to integrity checks for sequence accuracy, presence of a polyA tail and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accurately this particular cDNA clone. However, there are artifacts associated with the generation of cDNA clones that may have not been detected in our initial analyses such as internal priming, priming from contaminating genomic DNA, retained introns due to reverse transcription of unspliced precursor RNAs, and reverse transcriptase errors that result in single base changes. For further information about this sequence, including its location and relationship to other sequences, please visit our Web site (http://fruitfly.berkeley.edu) or send email to canaferior.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /t-ānslation="MLDVVGDELKARRKHILNDIENNVKWASNRMKRQLGITSGPVKL

Description: lst strand cDNA was primed with an oligo(dT) primer

[ATGTGGCCTTTTTTTTTTTTTTTT]; double-stranded cDNA was synthesized

using specific. s' and 3' primers and amplified by PCR. The PCR

product was digested with Sili and size selection was performed to

exclude fragments <1.5kb.The Sili-digested PCR product was performed to

into distinct Drail! sites of pME18S-FLJ. XhoI sites just outside

the Drail! sites can be used to isolate the cDNA insert. Libraries

were constructed by oligo-capping method

(Sugano et al.,University of Tokyo, Institute of Medical Science).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 191, Application US/09311021

Patent No. 6706869

GENERAL INFORMATION:
APPLICANT: Wong, Gordon G.
APPLICANT: Pechtel, Kim
APPLICANT: Applicant Clark, Hilary
APPLICANT: Applicant Genetics Institute, Inc.
TITLE OF INVENTION: BEREFEED PROTEINS AND POLYNUCLEOTIDES ENCODING THEM
FILE REFERENCE: GI 6300-11A
CURRENT FILING DATE: 1999-05-13

NUMBER OF SEQ ID NOS: 268

SOFTWARE: Patentin Ver. 2.0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 25, Application US/09451527
Patent No. 6482403
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Sim, Gek-Kee
APPLICANT: Yang, Shumin
APPLICANT: Wonderling, Ramani S.
TITLE OF INVENTION: CANINE AND FELINE IMMUNOREGULATORY PROTEINS, NUCLEIC TITLE OF INVENTION: CANINE AND USES THEREOF
FILE REFERENCE: IM.2-C2
CURRENT APPLICATION NUMBER: US/09/451,527
CURRENT TILING DATE: 1999-12-01
EARLIER APPLICATION NUMBER: 09/322,409
EARLIER FILING DATE: 1999-05-28

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 27, Application US/09451527

Sequence 27, Application US/09451527

Patent No. 6482403

GENERAL INFORMATION:

APPLICANT: Sim, Gek-Kee

APPLICANT: Wonderling, Ramani S.

TITLE OF INVENTION: CANINE AND FELINE IMMUNOREGULATORY PROTEINS, NUCLEIC

TITLE OF INVENTION: CANINE AND FELINE IMMUNOREGULATORY PROTEINS, NUCLEIC

TITLE OF INVENTION: ACID MOLECULES, AND USES THEREOF

FILE REFERENCE: IM-2-C2

CURRENT APPLICATION NUMBER: US/09/451,527

CURRENT APPLICATION NUMBER: US/09/451,527

CURRENT APPLICATION NUMBER: US/09/322,409

EARLIER PILING DATE: 1999-12-01

                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 29, Application US/10164595
Patent No. 6657054
GENERAL INFORMATION:
APPLICANT: OriGene Technologies, Inc
TITLE OF INVENTION: Regulated Angiogenesis Genes and Polypeptides
FILE REFRENCE: 1U 103 R1
CURRENT APPLICATION NUMBER: US/10/164,595
CURRENT ELING DATE: 2002-06-10
NUMBER OF SEQ ID NOS: 80
SOFTWARE: PatentIn version 3.1
SEQ ID NO 29
LENGTH: 3438

plants. The library was prepared using the Life
Technologies pSuperScript cDNA library construction kit.

Complementary DNA was synthesized from mRNA using a
poly(dT) sequence with a NotI restrictions site. Sall
linkers adapters were ligated to the blunt-ended cDNA
fragments followed by NotI digestion. The cDNA fragments
were directionally cloned into the NotI-Sall restriction
site of the pSPORTI vector. The ligated cDNA fragments
were transformed into a cools ElectroMax DH10B host cells.
This library was constructed in the laboratory of Dr. Lila
Vodkin by Anu Khanna at the University of Illinios at
Urbana-Champaign. email: l-vodkin@uiuc.edu"

/tissue type="1" mmature pods (~2cm long) of greenhouse
grown plants"
/lab host="DH10B"
/clone lib="Gm-c1071"
/note="Vector: pSPORT1; Site 1: Not1; Site 2: Sal1; The
cDNA library was constructed from mRNA isolated from
immature pods (approximately 2cm long) of greenhouse grown
plants. The library was prepared using the Life
Technologies pSuperSoript cDNA library construction kit.
Complementary DNA was synthesized from mRNA using a
poly(dT) sequence with a NotI restrictions site. Sal1
gel. First strand cDNA synthesis was primed with oligo-dT primer containing a NoI I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with Not I and then cloned directionmally into pXX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is GATAAGGCCA. Tissue was provided by Mary Hendrix."

linkers adapters were ligated to the blunt-ended cDNA fragments followed by Not1 digestion. The CDNA fragments were directionally cloned into the Not1-Sal1 restriction site of the pSPORT1 vector. The ligated cDNA fragments were transformed into E.coli ElectroMax DH10B host cells. This library was constructed in the laboratory of Dr. Lila Uvokxin by Anu Khanna at the University of Illinios at Urbana-Champaign. email: l-vodkin@uluc.edu"

/note="Vector: pBluescript II XR; Site_1: EcoRI; Site_2:
XhoI; This cDNA library was constructed from mRNA isolated
from immature flowers of field grown plants. The cDNA
library was prepared using the Stratagene pBluescript II
XR library construction ktr. Complementary DNA was
synthesized from mRNA using a primer consisting of a poly
(dT) sequence with a XhoI restriction site. EcoRI adapters
were ligated to the blunt-ended cDNA fragments followed by
XhoI digestion. The cDNA fragments were directionally
cloned into the EcoNA. XhoI restriction site of the
pBluescript vector. The ligated cDNA fragments were
transformed into XL10-Gold host cells. This library was
constructed by Dr. Randy Shoemaker and Dr. John
Erpelding."

New isolated, enriched, cell free and/or recombinant nucleic acid useful for e.g. altering cell proliferation characteristic such as to alter plant cell, organ or tissue size.

Claim 13; Fig 1; 77pp; English.

The present sequence encodes a E2F-dimerisation partner (DP) protein. The protein acts as a plant E2F transcription factor. E2F and DP are two proteins that hetero-dimerise to form an active transcription factor that regulates G1 to S phase of the cell cycle, and later, the expression of genes required for S-phase progression. E2F and retinoblastoma protein also interact as a hetero-dimer in cells to suppress certain genes. This repression involves binding of the retinoblastoma protein to the E2F-DP dimer that is in turn bound to sites on DNA through the E2F-DP domain. DP proteins can be modulated to alter plant cell, organ or tissue shape, and particularly to alter cell proliferation characteristic such as to alter plant cell, organ or tissue size 8  $\frac{1}{2}$   $\frac{1}{2}$

AAF80146-50 represent DNA fragments of a gene encoding a E2F-dimerisation partner (DP) protein. The protein acts as a plant E2F transcription factor. E2F and DP are two proteins that hetero-dimerise to form an active transcription factor that regulates G1 to S phase of the cell cycle, and later, the expression of genes required for S-phase progression. E2F and retinoblastoma protein also interact as a heterodimer in cells to suppress certain genes. This repression involves binding of the retinoblastoma protein to the E2F-DP dimer that is in turn bound to sites on DNA through the E2F DNA blinding domain. DP proteins can be modulated to alter plant cell, organ or tissue shape, and particularly to alter cell proliferation characteristic such as to alter plant cell, ö phase; New isolated, enriched, cell free and/or recombinant nucleic acid useful for e.g. altering cell proliferation characteristic such as to alter plant cell, organ or tissue size. 2P-dimerisation partner; DP protein; E2F transcription factor; G1 pha phase; cell cycle; retinoblastoma protein; alter cell proliferation; 965 CTTTTTGIGCCTAGCAGGTTATTAGGTCTCAGATAGATGATTCATATATGTGCTGCTATG 485 CGTAAAGAACTCGTCAACAATTAGGAACAAGAAGGCACTCCTCCAGGAAATCGAAAAA DNA fragment encoding a wheat E2F-dimerisation partner (DP) protein. AAF80146-50 represent DNA fragments of a gene encoding a E2F-dimerisation partner (DP) protein. The protein acts as a plant E2F transcription factor. E2F and DP are two proteins that hetero-dimerise to form an active transcription factor that regulates G1 to S phase of the cell cycle, and later, the expression of genes required for S-phase progression. E2F and retinoblastoma protein also interact as a heterodimer in cells to suppress certain genes. This repression involves binding of the retinoblastoma protein to the E2F-DP dimer that is in turn bound to sites on DNA through the E2F DNA binding domain. DP proteins can be modulated to alter plant cell, organ or tissue shape, and particularly to alter cell proliferation characteristic such as to alter plant cell, organ or tissue size
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  partner (DP) protein. The protein acts as a plant E2F transcription factor. E2F and DNA fragments of a a plant E2F transcription factor. E2F and DNA fragments that hetero-dimerise to form an active transcription factor that regulates G1 to S phase of the cell cycle, and later, the expression of genes required for S-phase of the cell sand retinoblastoma protein also interact as a heterodimer in cells to suppress certain genes. This repression involves binding of the retinoblastoma protein to the E2F-DP dimer that is in turn bound to sites on DNA through the E2F DNA binding domain. DP proteins can be modulated to alter plant cell, organ or tissue shape, and particularly to alter cell proliferation characteristic such as to alter plant cell,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

The protein acts as a plant E2F transcription factor. E2F and DP are two proteins that hetero-dimerise to form an factor. E2F and DP are two proteins that hetero-dimerise to form an earlive transcription factor that regulates G1 to S phase of the cell cycle, and later, the expression of genes required for S-phase progression. E2F and retinoblastoma protein also interact as a hetero-dimer in cells to suppress certain genes. This repression involves binding of the retinoblastoma protein to the E2F-DP dimer that is in turn bound to sites on DNA through the E2F DNA binding domain. DP proteins can be modulated to alter plant cell, organ or tissue shape, and particularly content of the plant cell, organ or tissue shape, and particularly content of the plant cell, organ or tissue shape, and particularly contents.
                                                                                                                                                                                                                                         E2F-dimerisation partner; DP protein, E2F transcription factor; G1 phase; S phase; cell cycle; retinoblastoma protein; alter cell proliferation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             67
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated, enriched, cell free and/or recombinant nucleic acid useful for e.g. altering cell proliferation characteristic such as to alter plant cell, organ or tissue size.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 GCACGAGCCGCCATGCGCGCCTCCCCGCGGAGCTGCTGCGGCCGCTACCGCCGCATG

The invention relates to full length GENSET human nucleic acids encoding potentially secreted proteins. The nucleic acids and the polypeptides they decode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate GENSET gene expression. For example, they be used to treat disorders associated with decreased GENSET gene expression by rectifying mutations or deletions in a patient's gene expression by rectifying mutations or deletions in a patient's gene expression by rectifying mutations or deletions in a patient's gene expression by binding with the cells' own genes and preventing the patients own production of GENSET polypeptides. Conversely, antisense nucleic acid molecules may be administered to down regulate GENSET expression. The sense and antisense nucleic acids may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples, and hence to determine which patients may be in need of restorative therapy. The GENSET polypeptides may be used as antigens in the production of antibodies and in assays to identify modulators (agonists and antagonists) of GENSET polypeptide con the present sequence is a GENSET nucleic acid of expression and activity. The present sequence is a GENSET nucleic acid of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; secreted protein; gene therapy; vaccine; treatment; diagnosis; GENSET; 88.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Full length GENSET human nucleic acids encoding potentially secreted proteins, useful in gene therapy and vaccination against a variety of diseases, and for diagnosis of those diseases.

The invention relates to an isolated nucleic acid molecule (I) comprising a nuclectide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (f) assessing the prostate cancer in a patient; (f) assessing the prostate call carcinogenic optential of a composition for inhibiting prostate cancer in a patient; (f) assessing the aggressiveness or indolence of prostate cancer in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Rat, pituitary, pituitrone, therapy, immune disorder, anaemia; Digeorge syndrome; haematopoietic cell; ataxia telangicctasia; Wiskott-Aldrich disorder; blood coagulation disorder; Addison's disease, autoimmune disorder; multiple selrosis; systemic lupus erythematosus; SLE; hyperproliferative disorder; gene therapy; neoplasm; infectious disease; immunomodulatory; cytostatic; antimicrobial; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ; (I) is also useful as a pharmacodyanamic or pharmacogenomic marker

Pituitrone is highly expressed in pituitary gland and is also expressed in brain tissues, spinal cord and kinhay. It may be used as antigens in the production of antibodies against pituitrone and in assays to identify modulators. Pituitrone cDNAs are also useful in gene therapy. Pituitrone may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate pituitrone expression. It may be useful in treating disorders related to reproductive and renal system, immune disorders, disorders of haematopoietic cells (e.g., anaemia, blood coagulation disorders, autoimmune disorder (e.g., Addison's disease, multiple sclarosis and systemic lupus erythematosus (SLE)), hyperproliferative disorders (e.g. neoplasms of bone, liver and pancreas)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acids encoding a novel pituitary hormone (pituitrone), useful for diagnosing, preventing and treating e.g. immune disorders, hyperproliferative disorders and blood coagulation disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

lactuation relates to a purilled nucleic acid molecule associated with cattle, and the LMFD nucleic acid can specifically hybridise to a second cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 15112 nuclectide sequences, appearing as ABX34836-ABX49947, or complements of them. Also included are (11) a transformed cell having a nucleic acid comprising an LMFD nucleic acid linked to a promoter and a 3' non- translated sequence that functions in the cell to cause termination of transcription and addition of polyadenylated ribonuclecides to a 3' end of the mRNA molecule; and of polyadenylated ribonuclecides to a wolecule in a bovine cell or tissue comprising; all incubating a marker nucleic acid (comprising any of the 15112 nucleic acid molecule obtained from the bovine cell or complementary nucleic acid molecule obtained from the bovine cell or complementary nucleic acid molecule obtained from the bovine cell or complementary nucleic acid permits the detection of the complementary nucleic acid permits the detection of the complementary nucleic acid permits the detection of the molecule. The LMFD nucleic acid is predictive of the certification of the molecule. The LMFD nucleic acid is used for the detection of the molecule. The LMFD nucleic acid is used for the detection of the molecule. The LMFD nucleic acid is used for the detection of the molecule in a bovine cell or tissue. It is useful for genome mapping, gene identification and analysis, cattle for genetically improving cattle. The PMFD nucleic acid acide 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

polymucleotides obtained from adult testes, foetal brain, adult brain, brain (foetal and adult), foetal kidney, adult spleen, and adult thymus brain (foetal and adult), foetal kidney, adult spleen, and adult thymus constant libraries. The polymucleotides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, haematopoiesis regulating activity, considerations activity, chemotactic/chemokineit activity, haematopoiesis regulating activity, consolication activity, and thromostatic and thromoblytic activity, and tumnour inhibition activity. The polynucleotides are also stated to be useful for gene therapy. Therapeutic compositions are also presently valuable for veterinary applications. AAZ5281 encode human secreted proteins, and AAX73390 to AAX73500 represent human secreted proteins, given in the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human, cancer associated gene, cancer antigen; detection, cancer, diagnosis; cytostatic; proliferative, vulnerary, immunomodulator; antidathmatic; antirhematic; antiarhritic; antiarhritic; antidathitic; antidathitic; antidation; antidiffammatory, antithyroid; antidallergic; antibacterial; cardiant; dermatological; neuroprotective; thrombolytic; coagulant; nootropic; vasotropic; antipsoriatic; antiangiogenic; gene therapy; inflammation; immune disorder; haematopoietic cell disorder; autoimmune disorder; allergic reaction; graft versus host disease; organ rejection; haemostatic; thrombolytic; cardiovascular disorder; infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel polynucleotides and proteins having biological activities which make them suitable for treating, preventing or ameliorating medical conditions in humans or animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes human secreted proteins encoded by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to human polymucleotides (AAI79941-AAI91841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to prytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity, inhibin activity and may be useful in the diagnosis and/or readment of cancer, laukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                        Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human secreted protein clone yd261_1 nucleotide sequence SEQ ID NO:191.

ARB4339 to AAB44339. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antidathetic; antidathetic; antidathetic; antidathetic; antidathetic; antidathetic; antidathetic; antidathetic; coagulator; chermatological; neuroprotective; caddiant; thrombolytic; coagulant; nootropic; vasotropic; antipsoriatic and antidanglogenic. The polymucleotides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Polymucleotides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune cells, uncommune calsorders in the totract disorders of haematopoietic cells, autoimmune disorders, allergic reactions, graft versus host disease and organ rejection, modulate haemostatic or thrombolytic activity, modulate infections. The peptides, nucleotides, antibodies, agonists and antagonists may be also be used in the exemplification of the process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAC77607 to AAC78448 encode the human cancer associated proteins given in
                                                                                                                                                                                                                                                                                                                                                                                       isolated nucleic acids comprising sequences encoding peptides 1 for treating or diagnosing e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 917 BP; 247 A; 269 C; 257 G; 142 T; 0 U; 2 Other;

```
The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both same or different individual, of protein expression in the first soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated bnA of the invention. The current sequence is not shown within the
                                                                                                                                                                                                                                                                             Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; immune related disease; diagnosis; antiinflammatory; cardiant; dermatological; antiarthritic; antirheumatic; immunosuppressive; haemostatic; antithyroid; antidiabetic; noctropic; neuroprotective; antianteanci; hepatotropic; virucide; antipsoriatic; antiallergic; antiantacic; systemic luque erythematosus; rheumatoid arthritis; osteoarthritis; spondyloarthropathy; systemic sclerosis; sarcoidosis; idiopathic inflammatory myopathy; Sjogren's syndrome; thyroiditis; systemic vasculitis; autoimmune haemolyvic anaemia; diabetes mellitus; autoimmune thrombocytopaenia; immune-mediated renal disease; demyelliating disease; hepatobliary disease; Mhipple's disease; inflammatory bowel disease; gluten-sensitive enteropathy; autoimmune disease; immune-mediated skin disease; allergic disease; immune-mediated skin disease; allergic disease; inflammatory disease; transplantation associated disease;

Sixty four PRO polypeptides, useful in the diagnosis and treatment of immune related disorders, e.g. systemic lupus erythematosis, rheumatoid arthritis, osteoarthritis, thyroiditis and diabetes mellitus.

# Claim 23; Fig 43; 309pp; English

The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO anti-Dodies, agonists and antagonists are useful for treating and diagnosing immune related disorders. The disorders are selected from systemic lupus erythematoous, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, spondyloarthropathies, systemic sclerosis, idiopathic inflammatory myopathies, Sjogrem's syndrome, systemic vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopaenia, thyroiditis, diabetes mellitus, peripheral netwous systems, hepatobiliary diseases of the central and peripheral nervous systems, hepatobiliary diseases, inflammatory bowel disease, gluten-sensitive enteropathy and Whipple's disease, autoimmune or immune-mediated skin diseases, allergic diseases, immunological
